L'HISTOIRE

De par la volonté de répondre aux évolutions du marché et plus particulièrement à la demande de couleur, en 2010 la société COPRODEX s'est également industrialisée en intégrant un atelier de plaxage muni de 3 lignes de production sur son site de Porcelette dans le Grand-Est.

Outre le plaxage proposé dans ce catalogue, nous pouvons vous accompagner dans vos projets particuliers de plaxage à façon.

De même, afin d'éviter le sur-stockage ou le délignage, Coprodex vous propose des profilés et colois livrable à la barre.

Pour ce service, une plus-value de 30% sera appliquée sur vos tarifs habituels.

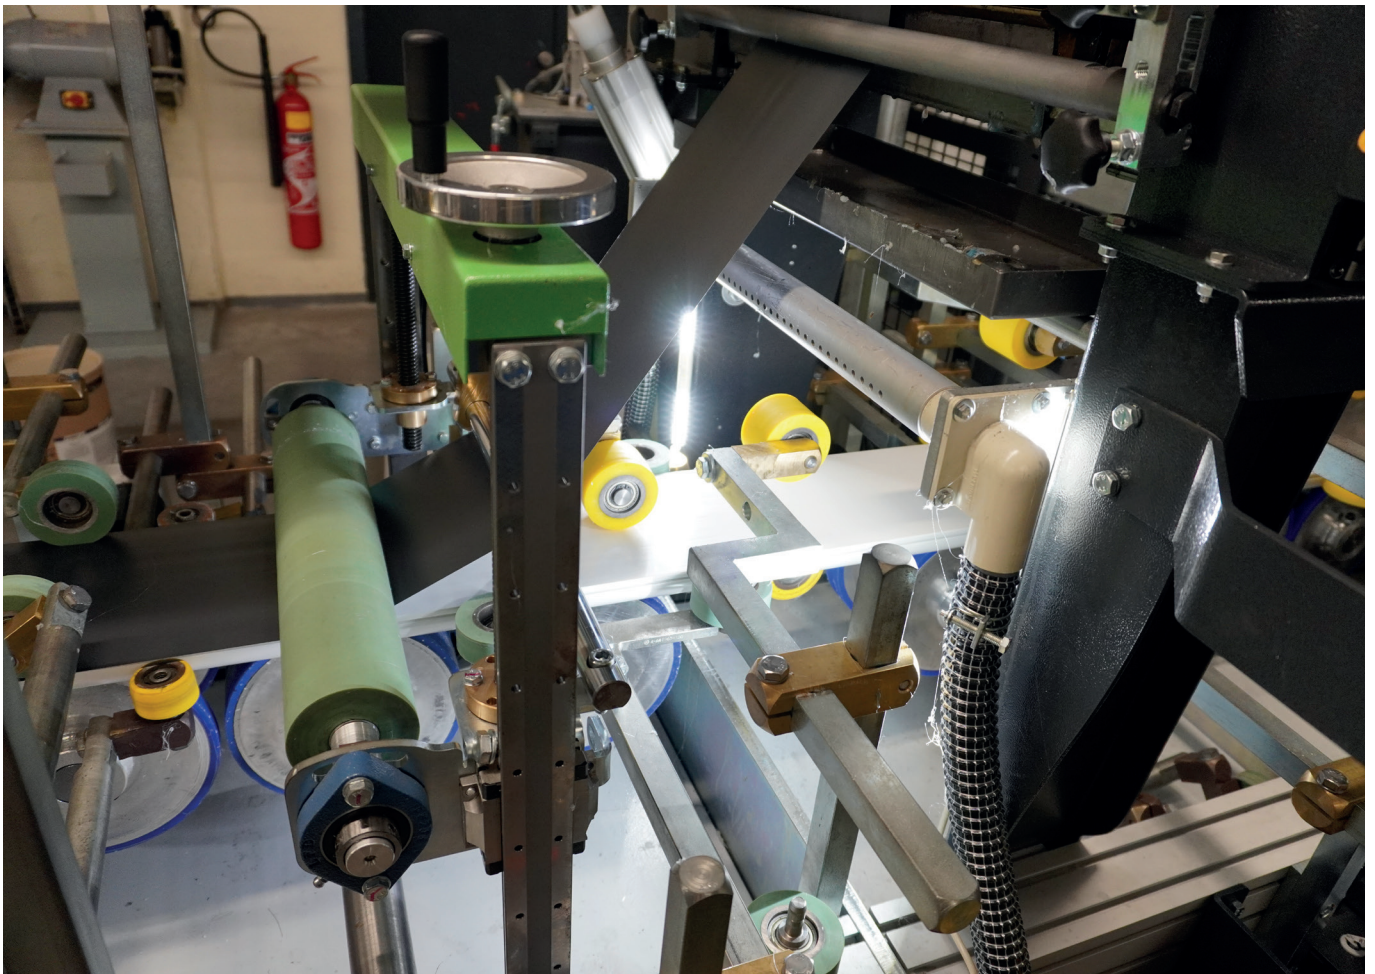

COMMENT CELA FONCTIONNE ?

Tout d'abord, ce sont des professionnels qui opèrent cette technique très innovante. Elle demande un certain savoir-faire et doit être réalisée avec soin.

Sur des barres PVC ou aluminium, le professionnel fait adhérer des films acryliques teintés au moyen d'une colle sans solvant. Ce procédé est pratiqué à haute température .

Ainsi, avec ces conditions réunies, le plaxage s'avère de bonne qualité et surtout il sera en mesure de résister aux affres du temps. (UV, décoloration, décollement...)

Avec cette technique, il est possible d'apporter de la couleur à toutes les menuiseries PVC et aluminium.

QUELLES COULEURS ?

Partenaire des marques Rénolit et Hornschuch, nous sommes en mesure de proposer toutes les teintes actuellement disponibles sur le marché (hors teintes exclusives).

Notre production est certifiée QB33 par les organismes du CSTB.

PROFILÉS REVÊTUS

<http://evaluation.cstb.fr>

**Découvrez nos plus de 300 teintes de plaxage sur notre nuancier en ligne :
<https://www.coprodex.pro/nos-teintes/>**

www.coprodex.pro

QUELS AVANTAGES ?

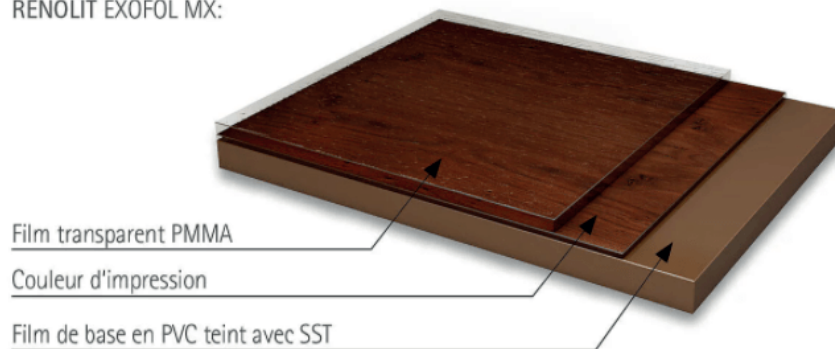

Une technique aux multiples avantages !

- Une tenue impressionnante dans le temps : le film utilisé contient plusieurs couches de couleurs ce qui permet de conserver la beauté de la teinte choisie
- Une résistance importante face aux UV : grâce à un traitement anti UV, le film de plaxage vient renforcer la solidité du PVC contre les rayons du soleil.
- Une isolation thermique maintenue : le PVC est un matériau naturellement isolant, le film de plaxage ne modifie en rien cette isolation.
- Un entretien minimaliste : il suffit d'une éponge douce et de l'eau savonneuse pour nettoyer le PVC plaxé
- Une solution économique : le PVC même plaxé reste une alternative très intéressante
- Un design sur mesure : choisissez parmi plus de 300 teintes
- Une imitation bois très réaliste sans entretien et sans avoir les inconvénients du bois
- Garantie des films jusqu'à 15 ans suivant modèles.

QUELLE COMPOSITION ?

Un film de plaxage basique se compose :

Structure schématique de la feuille extérieure
RENOLIT EXOFOL MX:

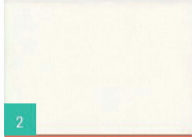

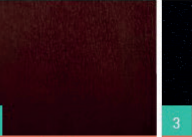

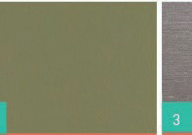

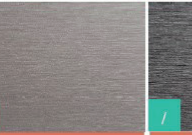

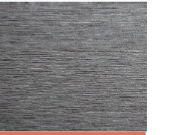

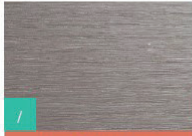

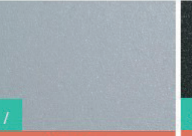

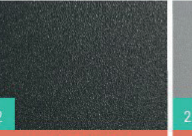

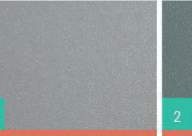

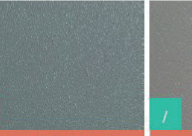

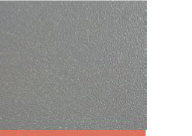

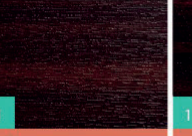

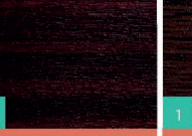

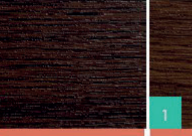

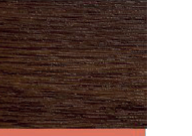

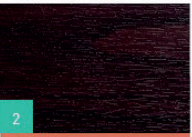

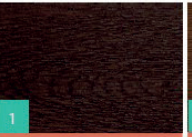

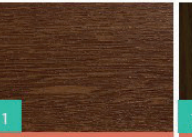

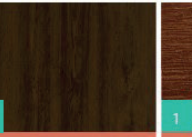

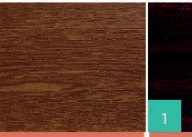

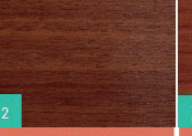

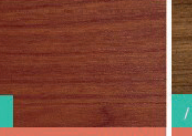

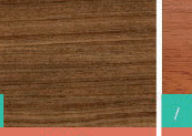

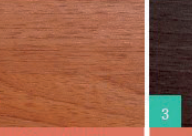

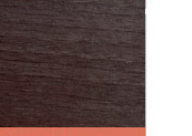

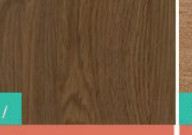

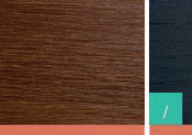

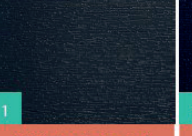

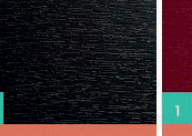

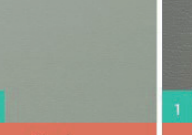

Les films PVC ont deux couches.

Les pigments colorés dans le film de base utilisent la technologie de protection solaire. Cela protège le profilé d'une accumulation excessive de chaleur.

La couche de base peut rester de couleur unie ou être imprimée, la couche supérieure transparente en PMMA protège les couleurs et les motifs contre le ternissement provoqué par les rayonnements UV et les autres effets des intempéries.
